

WHAT IS COLORIMETRY?

Colorimetry uses coloured optical filters, to alleviate symptoms of visual discomfort, which often occurs in both adults and children when reading. Visual discomfort is very common and can be described as movement of print or visual rivers, which negatively affects concentration levels and comprehension, also known as visual stress.

The following symptoms indicate you may be suffering from visual stress:

- Tired when reading
- Letters changing size or shape
- Halos of colour surrounding letters or words
- Red, sore, watery eyes
- Blurring of print
- Patterns on print
- Tiring easily when reading

Colorimetry is also extremely effective in treating patients with the following type of conditions, where visual stress is common:

- Dyslexia
- Head Injuries
- ADHD
- Photosensitive migraine
- Dyspraxia
- Autism
- Photosensitive Epilepsy

YOU DESERVE TO UNLOCK YOUR POTENTIAL!

At Eyesentials we take pride in using Colorimetry to reduce patients symptoms of visual stress, and if you suffer from any of the above symptoms we would love to help you!

Book an initial assessment today!
